## Why Mentor?

We have chosen to partner with Mentor as our supplier of implants because:

- MemoryGel™ Breast Implants have been successfully used and trusted for over 25 years by millions of women worldwide.
- All MENTOR® Breast Implants have been reviewed, and received approval to market by applicable regulatory agencies verifying that the products meet safety and health standards: CE marking of conformity and United States Food and Drug Administration (U.S. FDA) premarket approval (PMA). The MENTOR® Breast Implants marketed in the US comply with the FDA requirements. The MENTOR® Breast Implants marketed in EMEA comply with the CE-Mark requirements.
- Mentor has data from seven silicone gel breast implant clinical studies in the United States. Over 200,000 women have participated in these studies to provide a significant body of clinical evidence demonstrating the safety and effectiveness of silicone gel-filled breast implants.
- MENTOR® MemoryGel™ Breast Implants have a 98% patient satisfaction rate as indicated in the MemoryGel™ Round Breast Implants 8-year Core Study Data.
- Mentor is proud to be the first breast implant manufacturer in the industry to offer a limited warranty on all our silicone gel-filled breast implants. (See next page for details).
- In 2009 Mentor was acquired by Johnson & Johnson. With over 125 years of experience in healthcare, Johnson & Johnson is recognised as one of the worlds most trusted companies.

## PatientCare Promise

---

You can't put a price on peace of mind. So neither have we.

### Limited warranty plan for MENTOR® Silicone Gel-filled Breast Implants:

## Important Safety Information

MENTOR® MemoryGel™ Breast Implants are indicated for breast augmentation, in women who are at least 18 years old, or for breast reconstruction. Breast implant surgery should not be performed in those women with active infection anywhere in their body, those with existing cancer or pre-cancer of their breast(s), those who have not received adequate treatment for these conditions or those who are pregnant or nursing.

There are risks associated with breast implant surgery. Breast implants are not lifetime devices and breast implantation is not necessarily a one-time surgery. Patients may require additional unplanned surgeries on the breast(s) because of complications or unacceptable cosmetic outcomes. Many of the changes to the breast(s) following implantation are irreversible (cannot be undone) and breast implants may affect the ability to breastfeed, either by reducing or eliminating milk production.

The most common complications with MENTOR® MemoryGel™ Breast Implants include re-operation, implant removal, capsular contracture, asymmetry, and breast pain. A lower risk of complication is implant rupture, which is most often silent (meaning neither you nor your doctor will know you have a rupture). The health consequences of a ruptured silicone gel-filled breast implant have not been fully established. Screenings such as mammography, MRI, or ultrasound are recommended after initial implant surgery to assist in detecting implant rupture.

Patients are reminded to discuss the indications, contraindications, warnings, precautions and the risks and benefits associated with MENTOR® Breast Implants with their surgeon and review the Important Safety Information provided at [www.mentorwwllc.eu](http://www.mentorwwllc.eu).

It is important that you understand the risks associated with breast implant surgery when considering MENTOR® Breast Implants.
